FREE GUIDE

Make Claude build websites that *tell a story.*

A short AI film plays as you scroll, and every line of text lands on its moment. Five steps: write the story, make two stills, make the film between them, let Claude build the page, then let a second Claude judge it. Swap in any business.

the free skill, briefs and every prompt: github.com/EasyAIHenry/site-remix

what is inside

1 · Story first, no code	p2
2 · Make the end frame, then the start	p2
3 · Make the film between them	p2
4 · Build the page in Claude	p3
5 · Review it like an award jury	p3
Cost, and who this is for	p3
Worksheet · brief and prompt pack	file 2

two plans, first month
US$69

credits used, both sites
US$4.60

Claude scoring Claude, /10
4 → 7.5

what you need

Claude desktop app on Pro, US$20 a month

Higgsfield Plus, US$49 a month (US$39 billed yearly)

The free skill from the repo above

One moment worth filming

By Henry Chua. Both sites were built and reviewed on 7 October 2026 on a Mac (Windows untested). Kuroyu and The Hollow House are made-up businesses. Nothing here is sponsored.

how it works

Story, stills, film, page, review

1	2	3	4	5
Story	**Two stills**	**Film**	**Page**	**Review**
a one-page brief, no code	the end, then the start	Kling fills the motion between	Claude plays it as you scroll	a second Claude scores it

set up once, about 5 minutes

A Get the Claude desktop app (Mac or Windows; a paid plan, see page 3), sign in and click the Code tab. It is a chat that can make files on your computer, so you never open a terminal.

B Make a new empty folder, for example `my-site`. In the Code tab choose **Local** and pick that folder as the project folder. Everything goes in here: the brief, your Higgsfield downloads, the website.

C Type: **Install the story-scroll skill from github.com/EasyAIHenry/site-remix into my personal skills.** Claude installs it, and anything it needs first (it runs `npx skills@latest add EasyAIHenry/site-remix -g -a claude-code -y`). Start a new chat in the same folder so the skill loads.

1 Story first, no code

Code tab, prompt 1

Paste prompt 1 from the worksheet. Claude asks you questions, then saves **BRIEF.md**, a one-page plan, in your folder. It holds **one device** that carries the page, **one moment** worth telling a friend, each section as what happens → what moves → the words, and a shot list of every clip and still. Cut any section that is not part of the story. Both example briefs are in the repo: Kuroyu and The Hollow House.

Kuroyu — *ramen bar*

device	a clock tells one night, 08:00 to 02:00
moment	you scroll and the bowl builds itself
one beat	**08:00 → broth pours → "Bones in."**

The Hollow House — *haunted house*

device	a 1926 police case file you walk into
moment	up to the door, down the hall, she runs at you
one beat	**the door opens → "So was the door."**

2 Make the end frame, then the start frame

GPT Image 2.5 on Higgsfield

On higgsfield.ai, choose GPT Image 2.5 at 16:9 and make the finished hero shot first (prompt 2). The scroll ends here, so keep the subject centred with dark space beside it for text. Then attach it as a reference and ask for "Exactly the same photograph as the reference... the only change: the bowl is empty" (prompt 3). Download both into your folder as `end.png` and `start.png`.

Kling 3.0
start + end frame
10 s · Pro · sound off

3 Make the film between them

Kling 3.0 on Higgsfield, ≈ US$0.58 a clip

Choose Kling 3.0. Start frame: `start.png`. End frame: `end.png`. 10 s, Pro mode, sound off, prompt 4. Kling only invents the motion in between, so the scroll lands exactly on your hero shot. If Higgsfield suggests a preset, decline it so your exact prompt runs. Save it as `film.mp4` (more clips: `film2.mp4`, `film3.mp4`), then ask Claude: **make a contact sheet of film.mp4, one frame per second**. Re-roll if the camera drifts or parts morph. The strip below is a keeper. All prompts for both sites: docs/PROMPTS.md.

walking in: gate to door; the next clip starts on the door

4 Build the page in Claude

Code tab, prompt 5

type, in the chat where the skill loaded

```
/story-scroll Build a scroll website for [your business]
from BRIEF.md and the clips and stills in this folder.
Time every label to the frame its moment happens. Keep
text beside the film, never on it. Then open it in Chrome
for me.
```

Claude turns each clip into frames that play as you scroll, using two free libraries, GSAP and Lenis. It times each label to its frame and keeps the text beside the film. It may ask to install ffmpeg, a free video tool; say yes.

What you end up with: a website folder on your computer that opens in Chrome. Not online yet: ask Claude how to put this folder online (untested here).

08:00 empty · 14:00 broth · 23:38 egg · 23:40 served

5 Review it like an award jury

a fresh chat, prompt 6

Open a new Code chat in the same folder and paste prompt 6. That Claude has not seen the build. It scrolls the site at desktop and phone sizes, scores it like the creative director of an award-winning web studio, and lists must-fixes. It may ask to install a free browser tool. Click the build chat in the sidebar, paste the list, fix, and repeat until it says ship. It is still AI judging AI, so watch the scroll yourself too.

a second Claude scored it out of 10: would it win Site of the Day

Kuroyu	4 →	6.5 →	7.5
Hollow House	4 →	6 →	7.5

rounds 1, 2 and 3; round 3 said ship

what the jury caught

1. A dead first screen: nothing moved at the start.
2. The clock disagreed with the labels.
3. Chapters cross-faded into double exposures.
4. The scare face showed too often, so it stopped scaring.
5. Her sprint froze, then jumped.

credits used, both sites

US$4.60

about 120 credits, retries included (PROMPTS)

one 10 s Kling clip

US$0.58

Kling 3.0 Pro, 15 credits (skill notes)

To try it you need two plans; the credits come out of the Higgsfield plan. Higgsfield Plus: US$39 a month billed yearly, about 26 credits per US$1; the figures here use that rate, and month to month (US$49) they run about a quarter higher (higgsfield.ai/pricing). Claude Pro for the Code tab: US$17 a month billed yearly or US$20 monthly (claude.com/pricing). The skill is free.

Who this is for, and who it is not for

use it if

Your business has one moment that changes on camera: food being made, a place you walk into, a product that comes together. You get one strong film, a few lines of copy and a page you can launch or pitch with.

skip it if

You need a shop, many pages, or a site the owner edits weekly. Or most visitors are on slow mobile data: a visitor downloads about 15 to 25 MB of film frames. Or the film would show food or rooms the business does not have.

about the numbers in this guide

Prices, credits and plan details were checked on 7 October 2026 on higgsfield.ai/pricing and claude.com/pricing. Higgsfield and Anthropic change pricing, credit rates, promotions and terms at their own discretion, sometimes weekly. Treat every figure here as a snapshot on that date, not a quote, and confirm on the linked page before you pay. I am not affiliated with either company and I do not earn from these links.

If something here has changed by the time you read it, tell me in the comments and I will update the file. That is the point of keeping it as a shared document instead of a caption.

Henry Chua.
